GUNMAN IS KILLED AT WHITE HOUSE

Shot by Secret Service —
Bystander Is Injured

This article is by **Campbell Robertson**, **Chelsia Rose Marcius** and **Clarence Williams**.

A man who was already known to the U.S. Secret Service approached the White House complex on Saturday evening, took a gun out of a bag and opened fire before being shot and fatally wounded by Secret Service police officers.

The gunman, who was identified by two officials with knowledge of the investigation as Nasire Best, 21, was taken to a nearby hospital, where he was pronounced dead. No officers were injured, the Secret Service said.

An adult male bystander, who has not been publicly identified by law enforcement, was struck amid the hail of gunfire and was taken by emergency medical workers to a hospital. He underwent surgery and was in stable condition on Sunday, according to the Secret Service and Metropolitan Police.

The police are investigating to determine who shot the bystander.

In a social media post early Sunday, President Trump thanked the Secret Service and law enforcement officers involved in the shooting, and described the gunman as having “a violent history” and a “possible obsession” with the White House.

The shooting took place a little after 6 p.m. near 17th Street and Pennsylvania Avenue, at the northwestern corner of the White House grounds.

Mr. Trump, who was in the building at the time, had made it known on Friday that he would be spending the long holiday weekend at the White House.

In his social media post, Mr. Trump also appeared to renew his push for a proposed ballroom and security expansion at the White House, saying the episode underscored the need for “the most safe and secure space of its kind ever built in Washington.”

Mr. Best had been arrested last July for walking into a restricted area on the White House grounds, ignoring signs and commands to stop. At that time, according to an affidavit filed in District of Columbia Superior Court, Mr. Best had

Autism Clinics Pursue Profits From Preschoolers

By **SARAH KLIFF** and **MARGOT SANGER-KATZ**

CONCORD, N.C. — On a sunny Wednesday morning last month, dozens of preschoolers filed into a Compleat Kidz autism clinic. One wore light-up sneakers. Another had a Spider-Man lunchbox. They settled into tiny green cubicles, each accompanied by a staff member, and started their work.

A decade ago, Concord, a suburb of Charlotte, had no clinics providing therapy to children with autism. Now it has 12. Inside this one, children buzzed with activity as they worked long sessions with therapists. One 6-year-old girl, exhausted after hours of therapy, fell fast asleep in her therapist’s lap.

Short Naps, Long Hours and More Scrutiny on Medicaid Claims

Soon, a supervisor, Stephen Schroeder, intervened. “How long?” Mr. Schroeder asked Courtney Evans, the therapist.

“I set the timer for 7. We’re almost done,” Ms. Evans said. A couple of minutes later, she nudged the child awake. The girl cried.

At Compleat Kidz, a fast-growing chain of autism clinics based in North Carolina, the policy is firm: Naps cannot be longer than

seven minutes before children are awakened to resume therapy. The company says this is necessary to prevent fraud since clinics can be paid only when children are awake and getting services. But it also allows the clinic to bill insurers or Medicaid for more hours.

Across the United States, where treatment for autistic children was once fairly rare, thousands of clinics have sprung up, turning a once obscure therapy into a multibillion-dollar industry.

The growth has been fueled by rising autism diagnoses, state insurance mandates and a federal requirement that Medicaid cover the therapy. Private equity investors have rushed into the business,

Sending U.S. Trees Overseas for Insects to Chew On, So It Won’t Happen Here

By **SACHI KITAJIMA MULKEY**

The wriggling larva would one day metamorphose into the red coffee-borer moth, an invasive species that damages many plants. It hasn’t yet infested the United States — but here it was, on a cloudy morning in early 2023, burrowing into the trunk of an American oak tree.

Fortunately, that particular oak tree was growing in China, in what scientists call a “sentinel garden.”

These gardens, scattered around the world, are plots of foreign trees that researchers closely monitor to figure out what local bugs and diseases can damage them. The goal is to learn as much as possible about these potential threats before they cross

the ocean and become a problem at home.

“We send our trees overseas to see what bugs chew them up,” said Jiri Hulcr, a professor of entomology at the University of Florida, who is leading one of these projects.

Thousands of nonnative insects and plant diseases have found their way to the United States, of-

ten hitchhiking in on imported goods. As warming temperatures make it possible for species to survive in new places and global trade continues to expand, the spread of invasive species is expected to grow.

Many of these outsiders prove harmless, but some go on to ravage citrus groves, soybean fields and forests.

It takes just one to cause a huge problem, said Yiyi Dong, a researcher at the University of Florida. Native trees may have not evolved the defenses necessary to deal with foreign diseases and pests. Every so often an invader is able to exploit these vulnerabilities to overwhelm an ecosystem.

Tentative U.S.-Iran Deal Defers Thorniest Issues

Reopens Strait, but No Nuclear Decision

By **DAVID E. SANGER** and **TYLER PAGER**

WASHINGTON — The temporary agreement that the Trump administration announced with Iran this weekend isn’t a peace deal. It isn’t a nuclear deal. It isn’t a missile deal.

Those may yet come — perhaps in a few months, though a senior United States official said there was no agreed time limit for nuclear talks, or perhaps far longer if the history of negotiations with Iran holds. But for now, Mr. Trump has emerged with an arrangement that could extend a cease-fire and reopen the Strait of Hormuz, relieving the greatest energy disruption in modern times.

The best news from this at-the-brink negotiation between Washington and Tehran, mediated by a hard-line Pakistani general who a few years ago was on an American sanctions list, is that a conflict that easily could have spun further out of control appears to be de-escalating. Assuming both President Trump and Iran’s supreme leader, in hiding to avoid assassination attempts, approve the final wording, the choke point through which a quarter of the world’s oil passes should reopen.

That is no small thing at a time when Republicans feared they would be headed into the November midterm elections with gasoline hovering around \$4.50 a gallon and a president pursuing a war most Americans tell pollsters they oppose. For the Iranians, the opening comes just as their battered economy appears

about to crack from the loss of most of their oil revenue.

But for a president who had declared only 11 weeks ago that “there will be no deal with Iran except UNCONDITIONAL SURRENDER,” the agreement he announced this weekend was far short of that. And his tone was markedly different.

“The negotiations are proceeding in an orderly and constructive manner, and I have informed my representatives not to rush into a deal in that time is on our side,” he wrote on social media.

Until the supreme leader and other Iranian officials certify the understanding, “the Blockade will remain in full force and effect,” he wrote.

He added: “There can be no mistakes! Our relationship with Iran is becoming a much more professional and productive one.”

Yet Mr. Trump essentially gave in to the Iranian demand to kick the hardest issues down the road — while apparently succeeding in forcing the Iranians to end, at least temporarily, their stranglehold on of the world’s most vital waterways.

In the end, each side had little choice but to give ground. They chose the least bad of what each saw as bad options. But all that does is begin to restore the status quo to roughly where it was on Feb. 28, when Mr. Trump and Prime Minister Benjamin Netanyahu of Israel launched a war to finally bring Iran’s nuclear and missile programs to an end.

Founders Had a Blind Spot, And Trump Is Exposing It

By **ADAM LIPTAK**

The men who drafted the Constitution knew they were playing with fire when they created a novel and powerful new office: the president of the United States.

“The first man put at the helm will be a good one,” Benjamin Franklin said at the Constitutional Convention in June 1787, referring to George Washington. “No body knows what sort may come afterward. The executive will be always increasing here, as elsewhere, till it ends in a monarchy.”

The framers were not blind to the danger that they were creating a new kind of king, and the Constitution they adopted a few months later tried to strike a balance in inventing what was then a wholly novel office. They wanted a president who was decisive, responsive and responsible. But they also sought to establish a constitutional structure able to constrain a president who aspired to be a monarch.

They differed about how to achieve that balance. Alexander Hamilton, who argued in favor of an exceptionally strong presi-
