Kyiv Wonders Whether U.S. Will Strand It

Zelensky Says Satellite System Still Limited

By CONSTANT MÉHEUT

KYIV, Ukraine — President Volodymyr Zelensky expressed concerns on Sunday that the United States might abandon Ukraine and side with Russia, following a series of moves by the Trump administration, including what he described as continuing restrictions on a U.S.-provided military-grade satellite internet service used by the Ukrainian Army.

"If the United States will officially take the side of Russia, of course if these two countries will be together, of course we will not prevail and we will not be able to stand," Mr. Zelensky told NBC's "Meet the Press," in an interview conducted in English. "If United States will support Putin, I mean, it's unbelievable. It's a tragedy. It's a historic mistake and a big tragedy."

Mr. Zelensky's comments capped a week of rising tensions between Kyiv and Washington that began with President Trump's Oct. 9 announcement that he had brokered a deal to buy Russian diesel fuel, in a bid to lower gas prices before the U.S. midterm elections. To let Russian oil flow back into the market, Mr. Trump demanded that Ukraine halt its attacks on Russian oil refineries, which it begrudgingly did for a few days.

But Kyiv said it got nothing in return, while Russia continued its devastating bombardments of Ukrainian cities.

Then on Friday, Mr. Trump announced a rollback of new U.S. sanctions on Russia.

Mr. Zelensky has denounced the moves as benefiting Russia, the aggressor in the war, and complained about a string of developments that he said hampered Ukraine's ability to fight and that he strongly suggested were or-

O.J. Simpson was acquitted at his murder trial in 1995. "You know I couldn't have done this alone," he told a ghostwriter.

O.J. Simpson and the Informant

Long-Hidden Clues About Missing Weapon and Possible Accomplice

By MIKE BAKER and TIM ARANGO

O.J. Simpson entered a Miami hotel suite in June 2006 and sank into a chair. His eyes scanned the room, as if looking for a way out. His fingers rapped on the armrest.

The former N.F.L. superstar, television pitchman, movie star and onetime murder suspect had agreed to this meeting with his ghostwriter. Mr. Simpson planned to publish a confession — or at least a "hypothetical" confession — to the murder of his former wife and her friend. But he seemed to be having second thoughts.

He leaned in and scooped up a handful of nuts. He reached for a water bottle. The ghostwriter turned on his audio recorder, signaling the start of a conversation.

Mr. Simpson paused for a moment, the room draped in silence.

Joey Ippolito, a mafia associate and friend of Mr. Simpson, gave information to the authorities.

"You know I couldn't have done this alone," he began.

In the story Mr. Simpson told that day, later published in the book "If I Did It," he described a version of the 1994 murders of Nicole Brown Simpson and Ronald Goldman in which Mr. Simpson had help from a friend who got rid of the murder weapon and Mr. Simpson's bloody clothes.

Prosecutors who had failed to convict Mr. Simpson of murder have given little credence to the notion of an accomplice. The police, too. Many people considered the details of Mr. Simpson's hypothetical confession a fantasy, part of a desperate effort to cash in on his waning fame and notoriety amid growing money struggles and scrapes with the law.

But today, more than 30 years after the "trial of the century," newly uncovered evidence suggests that Mr. Simpson's account should not have been so readily dismissed.

A New York Times examination, based on recently unsealed court files, interviews and other evidence, details long-hidden information about the missing murder weapon, Mr. Simpson's supposed efforts to cover up the crime, and the possibility of an accomplice. Together, the findings challenge the popular narrative

SHOCK AND BLAME AFTER FIERY RIOTS CONVULSE FRANCE

NEARLY 2,400 ARRESTS

No Concrete Concessions From Macron as Sides Swap Criticism

By CATHERINE PORTER and SÉGOLÈNE LE STRADIC

PARIS — A day after some of France's worst riots in decades, President Emmanuel Macron vowed on Sunday to address some of the protesters' demands but offered few specifics, as the violence gave way to a furious political debate over who was to blame.

Mr. Macron said in an evening broadcast interview that he would seek to lower gas prices — a key complaint from some protesters — during a diplomatic trip to the Persian Gulf this week.

But he offered no concrete concessions, and appealed for "order, calm, not an escalation," criticizing calls to "take to the streets, to protest, to create disorder."

He also warned that "Those who looted will have to pay back, and those who sought to bring down the Republic will be held accountable."

On Sunday, the violence and protests had largely subsided, apart from sporadic skirmishes and looting involving small numbers of rioters in Paris, as the unrest gave way to political finger pointing.

Politicians from the far left to the far right criticized the government for a police response deemed too weak or ill-prepared — with some calling for the interior minister, Laurent Nuñez, to resign.

Mr. Nuñez told journalists on Saturday that the police had not been understaffed, but that it was hard to contain rioters "when they're scattered in small groups."

Saturday's unrest, which led to nearly 2,400 arrests, caused widespread damage to several symbols of the state. Among them was a 19th-century city hall largely de-

Trump's Rallies Aim to Outrun A Dismal Week

By TYLER PAGER

President Trump continued to sell himself as the Republican Party's savior as he crisscrossed the country in recent days, making it clear in words and sheer presence that this midterm election is about him.

NEWS ANALYSIS

But back in the nation's capital, Mr. Trump's White House was consumed by dramas that reinforced why polls show that his presidency itself has become a drag on Republican tickets.

Last Monday, Mr. Trump asked for the resignation of Kimberly Guilfoyle, his ambassador to Greece, after a string of embarrassing reports, including that she urged a donor to pay for her $100,000 credit card debt. The president on Thursday canceled the Pentagon's planned livestream of an execution of the Army officer convicted in the 2009 Fort Hood mass shooting after bipartisan outrage. And on Friday, he ousted his press secretary of five days after her bumpy debut.

Meantime, the White House Counsel's Office was investigating a dispute between two prominent Trump allies and former administration officials over

Delivery robots have touched a nerve for many Americans who are concerned about A.I. technology.

Your Food Robot Is en Route, Unless It's Mugged

Machines Face Hostile Public in Some Cities

By MADALEINE RUBIN

The food delivery robot was planted facedown on a downtown Los Angeles sidewalk, its four wheels askew, when Jag Gonzalez came to its rescue.

Small, squat and controlled by A.I., the machine can do most tasks on its own — except stand up.

"It wasn't my first one I've ever flipped over," said Mr. Gonzalez. "I had been seeing this abuse so much."

Mr. Gonzalez, 28, sent the robot on its way and headed to a movie, where he told friends about the rescue. But three hours later, there it was again on a new corner: the same droid, taking a beating from the Adidas-clad foot of a tottering pedestrian.

Mr. Gonzalez tried to stop the perpetrator. But the man crouched to look the robot straight in its LED eyes.

"You suck," he said — and delivered a final kick to its midsection.

Math World on 'War Footing' Over Incursions by A.I. Models

By ELISABETH BUMILLER

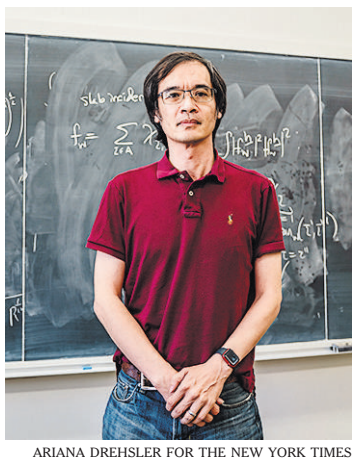

LOS ANGELES — Terence Tao is typically described as one of the world's greatest living mathematicians, but right now he is doing very little math.

"I'm on a war footing," he said while grabbing coffee during a two-day math workshop at the University of California, Los Angeles, that was rife with talk about the existential crisis that artificial intelligence has created in his field.

Days earlier OpenAI had announced that it had solved the Navier-Stokes problem, one of seven "Millennium Prize problems" that had stymied the greatest minds in math for nearly a century.

"There are no rules anymore," Dr. Tao, 51, said in an interview before the workshop in his modest office on the U.C.L.A. campus, his home since 1996, when he arrived after completing his doctorate at Princeton at age 20. "I'm just numb to what would have been jaw-dropping events for me a year ago. At some point, maybe I'll get hit by a whole wave of PTSD."

Instead he was hit by a bigger bomb on Oct. 6, when OpenAI released more than 350 findings in nearly every subfield of the profession, including algebra, number theory, theoretical computer science, mathematical logic and topology. Stunned mathemati-

ARIANA DREHSLER FOR THE NEW YORK TIMES

Terence Tao, a top mathematician, was optimistic about A.I. but now sees it as a threat.

cians, some who were close to solving problems they had worked on for years, found themselves beaten in an instant by A.I.

Dr. Tao, who has been a tenured professor since he was 24, said senior academics like himself were not as threatened by A.I. as those starting out. But the math world is looking to him for answers. He has accepted that his celebrated status has made him an unofficial spokesman for the field, a job that for now is consuming most of his time.

Until recently his job was as a bridge between the slow-moving world of higher math and the
