HAS WIDE EFFECTS

RESULT OF WAR IN IRAN

Thinning of Arsenal in
Other Regions Could
Embolden Rivals

This article is by Anton Troianovski, Jonathan Swan, Eric Schmitt and Julian E. Barnes.

WASHINGTON — President Trump’s war against Iran has depleted U.S. weapons stockpiles to troubling levels, siphoning supplies from Asia and Europe, according to senior officials.

The rapidly shrinking supply of air-defense missiles and other critical weaponry in Europe and Asia not only leaves the U.S. military less equipped, but could also leave Russia and China feeling emboldened should they contemplate a potential conflict with the United States, experts said.

Bombing Iran burned through thousands of multimillion-dollar missiles that contain precision parts from a global web of suppliers and can take years to produce. Defending against Iran’s retaliatory barrages has worn down U.S. stocks of air-defense missiles to an extent that has privately alarmed top officials in the Trump administration and has led to the United States’ delaying deliveries to European and Asian customers.

The Iran campaign has forced the Pentagon to rush ships, aircraft and air-defense units from across Europe and Asia to the Middle East, an effort with cascading consequences for equipment maintenance and troop morale, officials said. The result is a significant erosion of U.S. firepower in those regions, a shift with long-term implications that are a growing concern in the military and intelligence communities, senior U.S. and Western officials said.

Karoline Leavitt, the White House press secretary, said the

BEIRUT, Lebanon — When Israel launched its latest war against Hezbollah in March, the first targets the military warned it would strike were not weapons depots or underground command centers.

They were banks. Israeli fighter jets leveled more than a dozen branches of a shadowy financial institution known as Al-Qard al-Hassan, long accused of operating as Hezbollah’s bank in Lebanon. More airstrikes followed on exchange shops that Iran used to funnel money to Hezbollah, its Lebanese proxy, and on gas stations that generated revenue for the group.

With these strikes, Israel was sending a clear message: Hezbollah’s money, not only its arsenal, was in the cross hairs.

The bombings capped the most aggressive campaign yet by Israel, the Trump administration and Lebanon’s government to squeeze Hezbollah financially by disrupting the group’s funding channels, particularly from Iran.

For months leading up to the war, Lebanon’s government, under pressure from the Trump administration, worked to choke off the routes that the group used to receive and move money, such as Beirut’s international airport. Washington also pressed the Lebanese central bank to tighten controls over the country’s cash economy, which Hezbollah had long exploited.

Now, Hezbollah is grappling with its most severe economic strain in years, according to documents reviewed by The New York Times and interviews with Lebanese, U.S. and Israeli officials and Hezbollah insiders. Most spoke on the condition of anonymity, citing confidential intelligence assessments, diplomatic protocol or fear of retribution.

The war that began in March

How the Reflecting Pool Mirrored Trump’s Administration

This article is by Maxine Joselow, David A. Fahrenthold, Tyler Pager and Clarence Williams.

WASHINGTON — In January, the World of Concrete trade show drew 47,000 people to the Las Vegas Convention Center. One of them was the manager of a Trump Organization golf club in New Jersey, who had come seeking help with an enormous, unfamiliar task.

The manager, David Schutzenhofer, wanted ideas for how to fix the leaking, algae-ridden Lincoln Memorial Reflecting Pool in Washington.

Several vendors told him they knew just the guy to call: Rodney Jarboe, the president of the Missouri-based company Creative Polymers. Mr. Jarboe had worked on a bridge at another federal landmark, the Gateway Arch in St. Louis.

Laws and Facts Skirted,
and Blame Passed

In an interview, Mr. Jarboe said he first spoke in March with Mr. Schutzenhofer, who made clear that the work would be rushed. President Trump, Mr. Jarboe said he was told, wanted the renovation project done in time for the

country’s 250th birthday July 4.

“For this thing to be done in the time frame that was required, we almost had to have a contract and start manufacturing by the first week of April,” Mr. Jarboe said. “So it was a very tight deadline to make a decision.”

Those initial conversations about the Reflecting Pool, which have not previously been reported, kicked off an ad hoc plan

For More College Graduates,
Moving Home Is a No-Brainer

By NOAM SCHEIBER

When he hadn’t landed a job a few months after graduating from the University of California, Santa Cruz, two years ago, Tommy Balmat moved back to his childhood home in the San Francisco Bay Area. He figured looking for a job would be easier with fewer expenses to shoulder. And, perhaps no less important, he was still close with his parents, who were keen to have him back.

“I communicate with my parents about every thought that goes through my head,” said Mr. Balmat, who majored in literature and anthropology and had hoped for a job in book publishing. “They honestly really encouraged me to come back home if that’s what I wanted.”

Mr. Balmat is hardly the only recent graduate to have accepted

such an invitation lately. Data from the economists Stefania Albanesi, Rania Gihleb and Ning Zhang show that the portion of college graduates ages 23 to 27 living with their parents has returned to the high it reached during the Covid-19 pandemic. More than one-quarter did so as of last year, from a low of about 18 percent in 2001, according to updates to the paper that are not yet online.

The fact that so many young adults are living at home reflects persistent weakness in the job market for recent graduates even as the overall economy remains fairly strong. The weakness may be growing as artificial intelligence affects white-collar jobs.

At Kennedy Center, Few Creatures Were Stirring, Not Even ...

By ELIZABETH WILLIAMSON

WASHINGTON — President Trump’s takeover of the John F. Kennedy Center for the Performing Arts has left the building nearly empty. So the few lonely staff members who remain ahead of a potential two-year closure this month for renovations are prone to sharing tales of what for 50

years has made the place special. Like the mice.

Kennedy Center mice do not resemble the typical gray house mice found in fields and woods in warmer weather and in kitchens and attics when it’s cold. They are roughly half that size, with large ears and fur of a golden tan color that, if they were horses, would be called palomino. Their bellies are pearl white.

For years stagehands have spotted a tan mouse — or maybe alternating mice — sitting motionless beneath a wheelchair ramp facing one of the center’s two Millennium Stages, seemingly watching the evening shows. Over the holidays in 2024, the mice devoured a fancy charcuterie board that the cast of the Broadway musical “& Juliet” left out overnight in the Opera House.

The mice have also nosed their way into reviews of Kennedy Center performances. In 2018, what The Washington Post called a “baby mouse” lingered in the Concert Hall during a National Symphony Orchestra performance of Tchaikovsky’s “Francesca da Rimini.” The mouse ran for the prime seats near the stage and “scurried

Alpine field mice live in Italy’s Carrara region, and could be the ones at the Kennedy Center.

around 12 or more rows near the left aisle, forcing audience members to move their coats and bags as they struggled to remain quiet and still,” a Post arts reporter,
