In Alabama, the Right Vilifies an Islamic School

By **ROBERT DRAPER**
BIRMINGHAM, Ala. — In seventh-grade history, the topic was Hannibal’s invasion of Italy. In science class, a teacher dropped a chalkboard eraser to demonstrate the gravitational potential of energy. Down the hall, 16 third graders fielded questions about dhikr, a form of Islamic worship using repeated phrases to glorify God.
The school, the Islamic Academy of Alabama, has occupied the same small cinder block building in the Birmingham suburb of Homewood for the past three decades. It is considered one of the state’s highest-performing K-12 institutions, with graduation and college acceptance rates close to 100 percent. Located on the same campus where a school for Black children was burned down twice in the 1930s by the Ku Klux Klan, it had long gone without attracting controversy. Until last summer,

Academy Seeks Larger Building but Finds Vitriol Instead

that is, when school officials found a larger building to house its 270 students, in an office park in the nearby community of Hoover.
“The response was, ‘I didn’t even know these people are here, and now they need a bigger building?’” said Bryan Dawson, a Birmingham right-wing podcast host and chief executive of the Alabama outlet 1819 News. “That’s the alarm that went off in Hoover.” Mr. Dawson helped lead a grass roots campaign against the building, and late last year Hoover city officials voted against the school’s relocation.

Trapped in the Back When Robot-Haters Attack

By **ERIN GRIFFITH**
SAN FRANCISCO — In January, Doug Fulop was riding home from a night out in San Francisco when a man crossed the street in front of his car, doubled back and began screaming at him. The man punched the windows and tried lifting up the vehicle. He yelled that he wanted to kill Mr. Fulop and the other two passengers for giving money to a robot.
A taxi driver would have simply driven away. But Mr. Fulop’s vehicle had no driver — it was a self-driving Waymo.
“We felt helpless,” said Mr. Fulop, 37, who works in the tech industry.
Since autonomous cars started roaming San Francisco four years ago, they have elicited an array of reactions from humans, including angry protests against the vehicles. That has created an unexpected hazard for passengers of self-driving cars all around the city: being stuck inside the vehicle during an anti-robot rant.
Self-driving cars are designed to stop moving if a person is

Tech’s Big Bet On Weapons Is Paying Off

By **SHEERA FRENKEL**
SAN FRANCISCO — As the third week of the war in the Middle East continues, intelligence gathered by the Pentagon is being analyzed by technology from the artificial intelligence company Anthropic, on a system run by the data analytics firm Palantir.
Drones created by a defense tech start-up in Arizona have emerged as a key piece of the U.S. war arsenal.
And anti-drone systems made by a California start-up have been deployed to protect U.S. forces in the region.
Silicon Valley made risky bets in recent years on developing defense-related technology and providing services to the U.S. military establishment. Now those bets are paying off. From behemoths providing data systems to smaller companies offering novel weapons, tech firms such as Google, Palantir and OpenAI have found themselves at the heart of the U.S. war effort.
Their central role amounts to an “I told you so” moment. For years, the tech industry’s efforts on defense-related offerings faced skepticism and opposition, with no clear or immediate business rewards. Many Silicon Valley engineers opposed the use of powerful technologies for killing, battles and other military purposes — concerns that persist.
Despite those fears, venture capital firms have poured billions of dollars since the 2010s into start-ups building drones, lasers and other military systems. In

In Blow to Leadership, Iranian Security Chief Is Killed in Israeli Strike

Senior Trump Official Resigns Over War

This article is by **Aaron Boxerman, Ronen Bergman and Farnaz Fassihi**.
The Israeli military killed the man who was both Iran’s top national security official and its de facto ruler during the war, Iran and Israel said on Tuesday, dealing another severe blow to a regime that has been hammered by nearly three weeks of punishing U.S.-Israeli strikes.
The killing of the official, Ali Larijani, removes one of Iran’s most prominent voices of defiance and underscores Israel’s ability to target Iran’s most senior military and political figures. The Israeli military also killed the head of the Basij, a powerful Iranian paramilitary force, Israel and Iran said.
Israel announced their deaths on the same day that Joe Kent, the director of the National Counterterrorism Center, became the first senior member of the Trump administration to quit over the war with Iran.
In a letter to President Trump, which he posted on social media, Mr. Kent argued that Israeli officials and the American news media had deployed a “misinformation campaign” that had undermined Mr. Trump’s ‘America First’ platform and sowed pro-war sentiments to encourage a war with Iran.” His resignation widened a growing rift within Mr. Trump’s political movement over the war and, more broadly, over Israel and its role in American foreign policy.
“I cannot in good conscience support the ongoing war in Iran,” Mr. Kent wrote. “Iran posed no imminent threat to our nation, and it is clear that we started this war due to pressure from Israel and its powerful American lobby.”
Mr. Larijani, 67, a former speaker of the Iranian Parliament and the head of the country’s Supreme National Security Council,

had helped Iran prepare for war and was a close confidant of Ayatollah Ali Khamenei, the supreme leader who was killed in an Israeli airstrike at the start of the bombing campaign on Feb. 28.
Despite his stature within the regime, he was seen as an influential pragmatist with the clout to negotiate with the United States. His death could embolden Iranian hard-liners who believe that the Islamic republic can survive only by reinforcing its repressive rule.
The Israeli military said on Tuesday that it had also killed Brig. Gen. Gholamreza Soleimani, the commander of the Basij, a large paramilitary force deployed by the Iranian authorities to enforce security and violently suppress dissent.

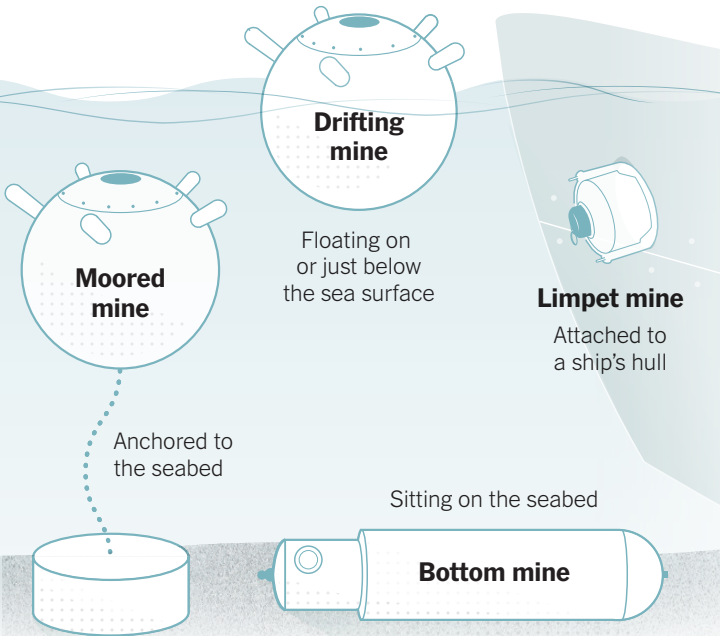

Fars, an Iranian news agency, later posted a statement from the Islamic Revolutionary Guards confirming that General Soleimani had been killed.
Iranian state media also confirmed that Mr. Larijani had been killed and called him a martyr. A funeral procession for Mr. Larijani will be held on Wednesday, Fars reported, along with a funeral for Iranian naval officers who were

Trump’s Shifts on Iran Threatening Globe

By **ZOLAN KANNO-YOUNGS**
President Trump dismissed the value of allies in his war in Iran on Monday. And then he demanded their help.
“We don’t need anybody,” he said, echoing a refrain he has sounded since the beginning of the war. But, he added, other nations must take up the task of securing the Strait of Hormuz, whose near-closure by the Irani-

NEWS ANALYSIS
ans is hobbling the global oil supply.
His remarks were the latest in a string of dizzying turnabouts in Mr. Trump’s positions on the war, sometimes issued in nearly the same breath. He has called it just an “excursion” but also a critically important means of addressing an existential threat. He

has said the United States has already “won,” but added that it should not leave yet because it still needs to finish the job.
Mr. Trump is no stranger to offering conflicting messages. He has long employed ambiguity as a strategy to appease differing factions in his political base and declare victory even in situations when the details are murky.
But as the president’s contra-
